Home UI

HOVER STATES

Sketch Concept 4

- ① File Browser becomes its own window based on easily-recognized, oft-referenced Mac Finder.
- ② Unlike Finder, new File Browser shows full path, solving "Where am I?" issue. No ceiling!
- ③ Remote data bridges readily visible, with authentication modal appearing as needed.
- ④ User can add files to "Orbits" (rebranding of "Spaces"), regardless of file's location.
- ⑤ Keep 3 of 4 views from Finder. Scrap "Album View" — data shows unnecessary.
- ⑥ Robust sort and filter options under a sensible icon.
- ⑦ User can open up multiple File Browsers, enabling simultaneous exploration.
